NETWORKED AUTOMATED DUPLICATION AND PRINTING

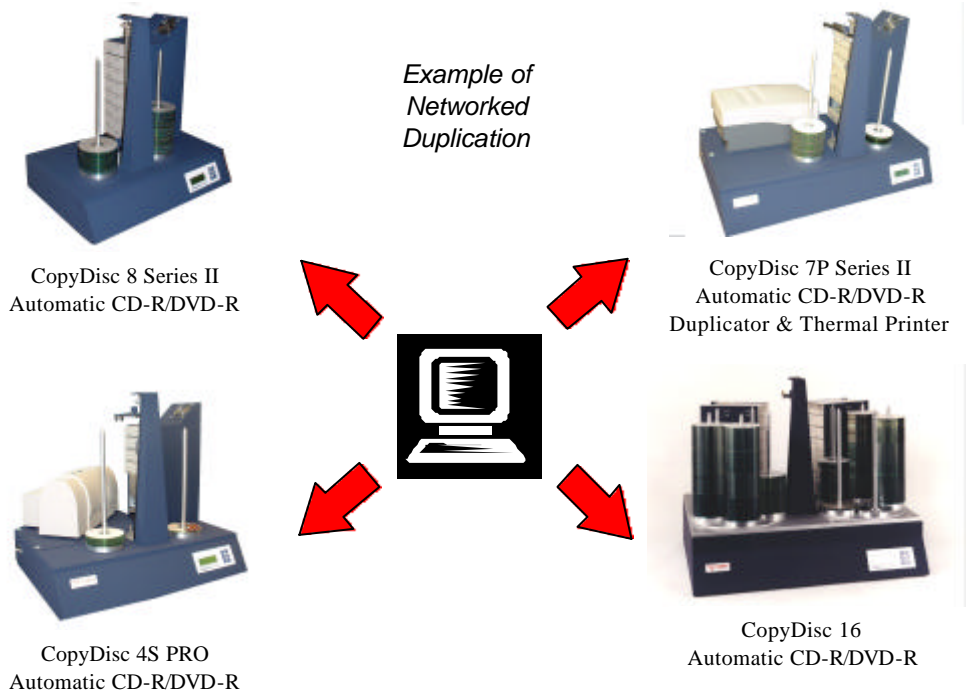

CopyDisc Net is an easy to use yet sophisticated and versatile CD-R/DVD-R duplicator management software system, providing multiple users with access to one or more of Verity Systems range of automatic duplicators and combined duplicators and printers. CopyDisc Net allows a CopyDisc duplicator to act as a peripheral device across a network.

This Windows based software suite enables you to duplicate an ISO master stored on your file server, and to request the required number of CD-R's for your duplicator to produce. CD masters can be stored on the file server and the required number of copies requested direct from the nominated PC. CD masters and print images (where applicable) can also be selected from the duplicator.

CopyDisc Net is available in two versions – Pro and Enterprise. Common to both systems is the ability to queue jobs (with or without print images) and to process two or more duplication jobs simultaneously (ideal for small quantity requirements) . For example: with a CopyDisc 8, an operator could queue 8 separate masters for duplication, requiring one copy of each, all 8 masters will be duplicated in one pass. CopyDisc Net can duplicate most CD-R formats (excluding CD Audio).

CopyDisc Net Enterprise provides the same features as CopyDisc Net, but in addition Enterprise can automatically create CD images on the fly. Simply select the PC directory where the files are stored, request the number of copies and select duplicate. Enterprise will take the PC files requested and create an ISO CD image as the files are transferred to the duplicator.

Enterprise also includes CopyDisc Net API (Application Programme Interface), a powerful interface between CopyDisc Net and a third party software application. For example, this allows a user to integrate a CopyDisc duplicator to an in house production/sales order system and create "on demand" CDs. This includes both multiple copies of the same CD or "one off" unique CDs.

CopyDiscNET

Network Connectivity

Specifications

Recommend Minimum System Requirements

CopyDisc NET

Network:

TCP/IP, 10/100 BaseT, Windows NT4.0 (with Service Pack 4 or later installed), MS 2000.

Storage Requirements:

10Mbyte available space required for software applications

Memory Requirements:

Windows NT 64 Mbyte,

Windows 2000 128 Mbyte

266MHz Pentium II (PIII, 750Mhz)

Screen Resolution:

800 x 600

Cabling:

CAT5 RJ45

Unit connect directly to network hub and not local PC.

Patch Cable required for direct PC connection (with no network capability), CD ROM Drive, Parallel Port.

Format Support:

CD-ROM Mode 1, Form 1 (ISO 9660, UFS, HFS); CD-XA Mode 2, Form 1&2; CD-1 Bridge Mixed Mode; CD-Extra (Blue Book Enhanced CD, CD Plus); Multisession, Kodak Photo CD; Video CD; Disk at Once.

Software Features:

Auto format recognition; Batch mode processing duplication; Copy/verify and byte for byte verification; Simulation testing; Advanced system diagnostics; Software firmware upgrades.
